

The government of Afghanistan and the international community has made a series of commitments in the Transition and Transformation phase of Afghanistan to strengthen the health system, access to basic and essential health services, human development, and economic growth. ... We believe that local problems can only be solved if local solutions ...

In Afghanistan, only 22 per cent of the 1,600 megawatts used each year are produced nationally, while the rest is imported from neighbouring countries. To increase domestic production, several key infrastructures are ...

Top officials from the UN Assistance Mission in Afghanistan and the UN Office for the Coordination of Humanitarian Affairs briefed ambassadors at the 15-member Council, describing the impact on civilians since the Taliban took over in August 2021. Roza Otunbayeva, Special Representative of the Secretary-General for Afghanistan and head of UNAMA ...

The electric power sector in Afghanistan suffers from numerous challenges. Decades of instability and conflict have have constrained the country's development, leaving more than one-third of its 32 million people below the poverty line, while 70% of the population has no access to electricity, including 90% of people living in rural areas (ADB, 2015; World Bank, 2015).

Afghanistan's neighbors stand to lose much from the downward spiral of their conflicting interests, since the Afghan problem tends to be an integrated part of their internal security challenges. Ultimately, a stable Afghanistan is in the best interests of all, but establishing the confidence necessary to break the spiral is no easy task.

However, the high number of panels (lasting up to 30 years) at each borehole and the fact that Khost is located in the Southern part of Afghanistan ensures a steady source of power all year round. " As a result, the solar pumping system is much more sustainable than the based on fueled-powered submersible pumps, explains Cristina.
