

a) Schematic illustration showing the comparison between our all-in-one structured LMB and the traditional LMB. The left shows the current value (26.4 nA) and specific capacity (0.25 μ Ah) per microcell for a LMB with LFP loading mass of 76 mg cm⁻². b) Simulation of ion-transport kinetics in the traditional three-layered LMB with separator membrane (left) ...

I was able to find another document that displayed the motherboard used for my all-in-one, and it clearly showed that a CMOS battery is present (CR2032). The comments indicated that the battery doesn't (normally) need to be replaced in the usual span of years that a user has this device, because it can last as long as 5-10 years.

To break through the challenge, an all-in-one battery design called ENERGISER (energy storage, sensing, and signal transducer), in which the functionality of batteries combines energy storage, sensing, and signal conversion, is proposed for the first time in this paper. The concept of the all-in-one ENERGISER is to develop an integrated battery system that can ...

Benefiting from the well-designed all-in-one construction and electrodes, the resultant all-in-one ZIB (AZIB) features an ultrathin thickness (about 97 nm), superior specific capacity of 353.8 mAh g⁻¹ (at 0.1 mA cm⁻²), and outstanding cycling stability (98.7% capacity retention after 500 cycles at 1 A cm⁻²).
