

Croatia solar farm in

How much solar capacity does Croatia have?

Historical solar photovoltaic market development of Croatia Croatia had a cumulative installed solar capacity of eligible producers of 53.4MW at the end of 2020. The first photovoltaic installations under the feed-in tariff (FIT) scheme started operation in 2012 and 2013. By the end of 2014, the country had approximately 33MW solar capacity.

How can Croatia benefit from solar energy?

However, to harness this potential effectively, Croatia will need to adopt more ambitious solar energy targets, ensure clear renewable energy investment direction in the power sector, and develop its modern electricity grid. The clean energy transition and development of the solar power sector can contribute to GDP growth and new jobs creation.

Is solar irradiation a viable energy source in Croatia?

The abundance of solar irradiation in Croatia shall enable photovoltaic energy to become an increasingly cost-competitive power generation source and attract new investments. Croatian solar resource potential Energy Institute Hrvoje Pozar initiated several solar radiation measurements projects in Croatia.

Does Russia still supply natural gas in Croatia?

For now, Russia still has the major role in the natural gas supplying in Croatia, but as it was stated above, the recently inaugurated LNG import terminal on the island of Krk is probably going to be a serious challenge to the Russian gas transmission policy in the whole area.

Does Croatia need gas?

By exploiting its own gas and oil fields, Croatia could cover approximately the half of its needs, but because of some decrease of its domestic fuel production, the country becomes more and more dependent on gas import. In addition, Croatia no longer has coal availability in its territory.

Croatia had a cumulative installed solar capacity of eligible producers of 53.4MW at the end of 2020. The first photovoltaic installations under the feed-in tariff (FIT) scheme started operation in 2012 and 2013.

Statkraft is a leading company in hydropower internationally and Europe's largest generator of renewable energy. The Group produces hydropower, wind power, solar power, gas-fired power and supplies district heating. Statkraft is a global company in energy market operations. Statkraft has around 7,000 employees in more than 20 countries.

Promina will be built in the Sibenik-Knin county in southern Croatia and will be the largest solar plant in the country upon commissioning in 2027. It will have more than 300,000 photovoltaic modules that will produce 320GWh, enough to meet the energy needs of 69,000 households, which will reduce CO₂ emissions by

Croatia solar farm in

140,000 tonnes a year.

According to their petition to the government, the Austria-based company proposed to reorganise the solar farm and deploy stronger photovoltaic modules, increasing the plant's capacity from 40 MW as initially intended. Ljutine, the solar project, is intended to be situated in Split-Dalmatia County's town of Ljubitovica.

Currently, the biggest power plant in Croatia gets on the Vis island. Acciona has one wind farm in Croatia, Jelinak, with a capacity of 30 MW, and also prepares to build 2 even more. DTEK is developing a wind farm near Split. The 2nd energy approval was granted for the Brda Umovi wind farm, with a capacity of 127 MW.

Acciona Energia will build the solar farm and a new substation at a site in the Sibenik-Knin county, southern Croatia, expecting to commission the facilities in 2027. The plant will feature more than 300,000 solar panels and will generate 320 GWh of clean electricity annually, equivalent to the power needs of around 69,000 households.

And domestic firm Krs would add a 60MW solar PV plant with an expected output of 100 GWh/yr at Bibinje, around 40km from Jasenice. The two developers are registered at the same address in Zagreb and are linked to ...

A few days earlier, DRI unveiled plans for the construction of a wind farm in Croatia, saying that the project is the first step toward deploying 500 MW of wind and solar capacity in the country by 2028. The scheme will be the ...

RP Global, a European renewables developer, sets forth to build a 50 MW solar farm in southern Croatia, according to the country's ministry of economy and sustainable development, which received the project's modified environmental impact assessment.

The Korlat solar power plant is the largest photovoltaic project in Croatia to have received a construction permit. With a nameplate capacity of 99 MW and a grid connection of 75 MW, the plant is expected to generate 165 GWh annually, enough to power approximately 50,000 households.

The other part of the tender procedure awarded premiums for solar projects with capacities ranging from 200 kW to 6 MW, and wind farms with capacities from 200 kW to 18 MW. The quota was 100 MW ...

In another recent development, German renewables developer WPD started licensing in October for a 35MW solar PV plant at the site of its already operating 34.2MW Katuni wind farm at Sestanovac in southeast Croatia. Croatia's solar PV and wind capacities may rise to 768MW and 1,364MW in 2030 from an estimated 96MW and 734MW in 2020, respectively ...

Upon completion of these projects, ACCIONA Energía is expected to be main producer of clean energy in Croatia, with around 8% of the country's renewable installed capacity and 20% of ...

Croatia solar farm in

Spanish energy developer Acciona Energía has been awarded a 12-year contract for difference (CfD) to develop the 189 MW Promina solar project, currently under construction in southern Croatia.

Promina will be built in the Sibenik-Knin county in southern Croatia and will be the largest solar plant in the country upon commissioning in 2027. It will have more than 300,000 photovoltaic ...

A few days earlier, DRI unveiled plans for the construction of a wind farm in Croatia, saying that the project is the first step toward deploying 500 MW of wind and solar capacity in the country by 2028. The scheme will be the company's first project in Croatia, along with the construction of a 110-kV substation.
