

Fmc energy systems Haiti

What kind of energy does Haiti use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Haiti relies on a mix of imported oil and domestic biofuelssuch as wood and sugar cane for its total energy supply. As of 2020,more than 90% of electrical generation in Haiti was derived from fossil fuels and less than 10% from renewables.

How does oil affect electricity in Haiti?

Like many island nations,Haiti is highly dependent on imported fossil fuels for electric generation--roughly 85% of its electricity is produced from the combustion of petroleum-based fuels. This leaves the country vulnerable to global oil price fluctuations,which directly impact the cost of electricity.

How much oil does Haiti import a day?

During 2016,Haiti imported 20,030 barrels per dayof refined petroleum products. Haiti is largely dependent on cheap imports from Venezuela,which have been affected by the Venezuelan economic crisis.

So, reducing energy consumption can inevitably help to reduce emissions. However, some energy consumption is essential to human wellbeing and rising living standards. Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product.

By using solar energy, one of the plants at the Panoli site has ZERO GHG emissions. This has led to the entire site getting an annual benefit of 10% reduction in GHG. This will not only help to reduce our carbon footprint and contribute towards our Sustainability goals, but will also help save costs since solar is a sustainable form of energy.

"FMC's global investments in energy-efficient processes have resulted in reduced usage of absolute energy with minimal disruptions over the past two years. Expanding the use of solar energy at the Panoli manufacturing plant is a step forward in this direction, reducing our overall carbon footprint and promoting the health and safety of local ...
