Second, the electricity produced by solar plants is a profitable side income. Today, in many countries, as well as in Armenia, where solar energy is developing, there is a "Green Tariff". The latter is a clear mechanism by which the state buys electricity produced from alternative energy sources from private individuals.

Improvements in low-carbon technologies, driven in part by foreign energy policy, have created new opportunities for Armenia, a country without fossil fuel reserves, aligning environmental concerns and the pursuit of ...

Crucially, Pashinyan has also made the case for accelerating Armenia's green energy transition and, in his government's 5-year economic plan, foresees solar energy to cover 10 percent of the country's total energy consumption in 2024. The country has huge untapped potential for green energy -- hydro, solar, wind power and geothermal.
