

Solar water heating systems, or solar thermal systems, use energy from the sun to warm water for storage in a hot water cylinder or thermal store. Because the amount of available solar energy varies throughout the year, a solar water heating system won't provide 100% of the hot water required throughout the year.

A typical Guernsey home has at least one roof that faces east, south or west, or a flat roof that may be open to all the sun's orientations. From a few panels to four panels or more and typically 6 to 10 panels, you can maximise your generation by maximising your roof spaces.

The report estimates that Guernsey currently has installed two megawatts of solar PV and one MW of battery energy storage, and this could be increased by 150 fold in 15 years to 300MWs, which would account for about half to a third of the islands electricity needs.

In the near future, Guernsey Electricity will be restructuring and rebalance their tariffs. View the current tariffs. This means the standing charge will be increasing and the cost per unit of electricity will be decreasing.. The fixed element of a customer's bill, currently known as the standing charge (or connection fee), represents the cost of being connected to the network.

In 2023 Guernsey Electricity worked in conjunction with The Little Green Energy Company to install the vast community-scale solar array at Grow Limited's newly redeveloped headquarters. The 310 photovoltaic (PV) panels will produce 129-kilowatt peak power (kWp).
