

Jinan New District Photovoltaic Support

How much solar power does Shandong have in 2023?

Shandong province added about 14 gigawatts of solar in 2023, and the province now has the ability to produce more power than it can use at certain times during the day. It's the leading province for renewable energy capacity, but that also means it's the first to encounter the difficulties of rapid growth.

Where are solar panels being cleaned in China?

Workers cleaning solar panels work on the rooftop of the factory of energy equipment manufacture Iraetaon the outskirts of Jinan in eastern China's Shandong province on March 21, 2024. It's the leading province for renewable energy capacity, but that also means it's the first to encounter the difficulties of rapid growth. (AP Photo/Ng Han Guan)

Why is Shi halting new rooftop solar installations in Shandong?

The push -- in both industrial solar and in rooftop installations like Shi's -- is working so well that the grid now has more power than it can handle. Shi was fortunate to get in early; some cities across Shandong province, including her village, are halting new rooftop solar installations.

Where are solar panels located in 2024?

Solar panels sit on the rooftop of a house in the rural outskirts of Jinan in eastern China's Shandong province on March 21, 2024. China is the runaway leader in supplying the world with the hardware to gather solar power. Now it's pushing to install more at home, and it's working so well that the grid now has more power than it can handle.

How much solar energy did China add in 2023?

China added 216 gigawatts of solar in 2023, a little over half in large solar farms, according to the country's National Energy Administration. China's total is more than half of what the entire world added last year, according to research from the consultancy Wood Mackenzie.

Is China a leader in solar energy development?

China is the runaway leader in supplying the world with the hardware to gather solar power. Shandong Province is taking an early lead in the country's solar energy development. But the country's grid is getting more than it can use in some places. Experts say China must quickly adapt to oversupply to remain leading in the global solar race.

The document made it clear that by 2025, the installed capacity of new and renewable energy power generation in the city will strive to reach 4.7 million KW, including 3.2 ...

With over 8 years of experience in renewable energy technology, Jinan Bestop New Energy Technology Co., Ltd. excels in energy storage solutions and photovoltaic achievements. Our ...
