Kazakhstan is the world's leading producer of uranium, used for nuclear fuel, but currently does not have any nuclear power in its energy system. However, the country has experience in the sector, having had a BN350 sodium-cooled fast reactor in operation for 26 years, until it was shut down in 1999, and three research reactors that remain ...

Nevertheless, the issue of grid integration already looms large. One reason for this is the lack of balancing capacity in Kazakhstan's power sector, which is dominated by inflexible coal-fired power plants. In this respect, Kazakhstan differs from its neighbour Uzbekistan, where the share of flexible natural gas generation stands at 74 per cent.
