Handcrafted with love and spiritual reverence, each item is a unique piece of art, preserving the purest craftsmanship. Our charity includes education, healthcare, and environmental conservation. KAILASH ENERGY not only conveys spirituality and aesthetics but also engages in charitable endeavors to give back to society.

Will Malaysia's energy demand continue to grow?

Long-term economic and population projections indicate that Malaysia's energy demand will continue to grow. In the past two decades, energy demand has grown by around 3% per year, and growth is estimated to average around 1.4% per year until mid-century. Malaysia is traditionally a fossil fuel producer with large reserves of oil and natural gas.

What is Malaysia's energy mix?

According to Global Data, coal, oil and gas account for 75% of the country's current power mix. As of 2024, IRENA notes renewables account for just 5% of Malaysia's energy mix. Hydropower and solar make up the majority. However, according to government data, as of the end of 2020, renewable energy sources accounted for 23% of national power.

Does Malaysia rely on fossil fuels?

Over the past decade, the country's total primary energy supply has grown at an average annual rate of 3%, and the energy mix relies predominantly on fossil fuels. While Malaysia has traditionally been a producer and net exporter of fossil fuels, this trade balance could shift towards greater dependence on fossil fuel imports.

What is Malaysia's Energy Transition outlook?

Hence, this Malaysia energy transition outlook - which embodies the cumulative efforts of IRENA and the Ministry of Natural Resources, Environment and Climate Change - is a timely document that presents options for the nation to accelerate its energy transition and achieve our carbon-neutral goals.

What is the share of renewables in Malaysia's power sector?

The share of renewables in Malaysia's power sector under the PES is 52%, of which 23% is supplied by solar generation. That increases to 81% under the 1.5-S RE90 scenario, with 27% (95 TWh) provided by hydropower and 49% (172 TWh) from solar.
