What is photovoltaic (PV) technology and how does it work? PV materials and devices convert sunlight into electrical energy. A single PV device is known as a cell. An individual PV cell is usually small, typically producing about 1 or 2 watts of power. These cells are made of different semiconductor materials and are often less than the thickness of four human hairs.

One study [3] conducted in the early 1990s on modules collected from a solar array in California showed a reduction of 9-50% in the efficiency of the modules, depending on the amount of yellowing.
