

What energy sources are available in Myanmar?

Myanmar is endowed with rich natural resources for producing commercial energy. Currently, the available energy sources in Myanmar are crude oil, natural gas, hydropower, biomass, and coal. Wind energy, solar, geothermal, bioethanol, biodiesel, and biogas are other potential energy sources.

Does Myanmar have energy balance tables from 2000 to 2016?

Lots of energy data clearly exists and is useful for making Myanmar energy balance tables from 2000 to 2016. But some energy data is still missing, making estimation of missing data indispensable. The following items are estimated under this project. Ministry of Natural Resource and Environmental Conservation (MONREC) (2018). Nay Pyi Taw: Myanmar.

What is the energy saving potential of Myanmar?

According to the 2015 Asian Development Bank report 'National Energy Efficiency and Conservation Policy, Strategy and Roadmap of Myanmar', electricity consumption in all sectors and achievable energy saving potential should reach 12% by 2020, 16% by 2025, and 20% by 2030.

What is Myanmar's energy policy?

Use of new and renewable energy sources is encouraged, especially solar and wind, which are abundant in Myanmar. The policy also accepts that people will still need to use traditional energy sources such as wood and charcoal. Regulations and anticipatory actions are necessary to sustain the harvesting of these primary energy sources.

Does Myanmar have energy statistics?

Myanmar also acknowledges electricity as the main power source driving economic development and addresses the need to generate and distribute more power in terms of greater volume, density, and reliability. But, so far, the country does not have national energy statistics, especially energy balance tables.

How to analyze energy demand and supply situation in Myanmar?

Collect sales data of petroleum products from oil-importing companies in Myanmar. Estimate missing data. Produce Myanmar's energy balance tables (EBTs) for 2000-2016 based on existing data and the estimated data from the survey results and other information. Analyse the EBTs to evaluate the energy demand-supply situation of Myanmar.

Myanmar's energy policy aims to ensure energy independence by increasing national production of available primary energy resources through intensive exploration and development activities, including energy efficiency and conservation

Myanmar: Many of us want an overview of how much energy our country consumes, where it comes from,

and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

increase in energy consumption in all sectors. Myanmar is endowed with abundant, rich natural resources that, if fully developed, would be sufficient to meet most of the country's daily energy needs. Myanmar's energy policy is generally aimed at ensuring energy independence by increasing national production of available

Myanmar: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.
