

Which company will build the most powerful ground-mounted solar facility in Switzerland?

Zug, 13th January 2022 - VARO Energy Group ("VARO") and Groupe E, companies active in the energy transition, announced today that they will build the most powerful ground-mounted solar facility in Switzerland. 19,000 photovoltaic panels will generate a significant portion of electricity consumed by Switzerland's only refinery, located in Cressier.

How much energy will Switzerland need in 2035?

It sets a target of 35 TWh/year from new green technologies (solar, wind, wood and biogas) by 2035, compared with the level of around 6 TWh/year in 2022. This target would represent around half of Switzerland's electricity demand that could be expected in 2035. The other half would be met by hydroelectric power and imports.

Should Switzerland put solar panels on every Rooftop & wind turbine?

Switzerland's task now is to make practical compromises when it comes to conserving landscapes and biodiversity: we don't need to put solar panels on every rooftop and wind turbines in every available location, but there does need to be an increase in capacity, ideally guided by social considerations and based on our experience with pilot plants.

Why is Switzerland a good place to invest in energy?

Switzerland has a unique opportunity not only to use its innovative strength for the energy transition in its country, but also to export technologies, expertise and experience to Europe and the world in the future. Gabriela Hug is Chair of the Managing Board of the Energy Science Center (ESC) at ETH Zurich.

Welcome to NextGen Solutions (NGS) NextGen Solutions (NGS) is an industry leader in Air Conditioning, Solar Power and Insulation for domestic and commercial applications. Since 1991, we have specialised in designing, installing and maintaining systems to ...
