Should I buy a UPS battery backup in Peru?

If you're staying in Peru for a while and you want to use a desktop computer, buy a UPS battery backup (Uninterruptible Power Supply) so that you don't lose your work -- and potentially damage your computer -- when the power goes out.

What is the power supply voltage in Peru?

In Peru, the supply voltage is 220 volts at 60 hertz. For most European devices, as well as in India, Australia and many African countries a voltage of 220 - 250 volts applies, so there will be no problem plugging your electronic item into a power outlet in Peru.

Are power surges a reality in Peru?

While Peru's electricity infrastructure has made strides in recent years, it's important to note that power surges and intermittent blackouts may still be a reality, especially in rural areas. Considering the use of surge protectors or voltage stabilizers can help safeguard your electronic devices from potential damage due to power surges.

Is there electricity in Peru?

The electrical supply in Peru is far from perfect, especially in smaller towns and cities (and there are still some rural settlements that have no electricity). Power outages are common, which is frustrating if you're using a laptop and downright depressing if you're using a desktop computer without a battery pack.

Will my appliances work in Peru?

If you're coming from a country with mains voltage rated at 250 volts (between 220 and 250 volts), then your appliances should work fine in Peru (check the appliance beforehand, just in case). These countries include the UK and much of Europe, India, Australia and many African nations.

How do I ensure a secure connection in Peru?

This is the only way to ensure a secure connection. Adapters and Converters: Adapters are essential for travelers who need to plug their devices into Peru's Type-A or Type-C outlets. These adapters convert the shape of the device's plug to fit the outlet. However, adapters do not convert voltage or frequency.
