

Reasons for the voltage increase of photovoltaic inverters

Does a solar inverter cause a voltage rise?

Voila, Solar Voltage Rise. In the ideal situation, the voltage rise is not a problem: the inverter increases the grid voltage from 240 volts to 242 volts. The problem arises when the customer's cables between the inverter and the grid are too small for the size of their solar system. Let's get back to basics to understand why.

Does solar voltage rise reduce solar production?

Solar Voltage Rise can significantly reduce your solar production, but the problem is often ignored. It's one thing to use a quality inverter and panels, but if solar voltage rise is not considered by your solar installer, then your solar may produce significantly less than it should have.

How does a solar inverter work?

When your solar system is producing more power than your home is using, it sends the excess back to the grid. In order for power to flow from your home to the grid, the voltage from the solar inverter has to produce a voltage that is a couple of volts higher than the grid voltage. Voila, Solar Voltage Rise.

Is solar voltage rise a problem?

Solar Voltage Rise starts becoming a problem. Solar Voltage Rise is a relatively new issue that is causing problems with solar systems and grid voltages around Australia. The more solar that is installed in your street, the higher the grid voltage gets at lunchtime.

How much voltage rise between a solar inverter and a street?

According to the Australian Standards AS/NZS 4777, the voltage rise between a solar inverter and the street can be no more than 2 per cent (about 5 volts). In theory, you can use ohms law to calculate the voltage rise of a cable if you know the resistance and reactance of the cable.

What causes a voltage rise?

Hence, active power increases with an increased penetration level. This results in the voltage increase at the PCC, thereby causing a voltage rise. Voltage rise challenges were reported as the foremost concern against the connection of RDG to medium and low-voltage distribution networks 45,46,47,48.
