This cell uses a silicon-based anode, the working voltage range is 2.4-4.37V, and the cathode is also a high-nickel ternary. However, due to its low voltage, only 3.45V, the specific energy of >500 wh kg battery needs to be more than 65% of the mass of the cathode material.

The Li-Air battery has been receiving attention as the next generation battery because of its high theoretical specific energy of 3400 Wh kg⁻¹. The quoted specific energy is an order of magnitude higher than that of the future generation Li-ion battery, which is predicted to reach at most of 400 Wh kg⁻¹ [1, 2]. The high specific energy of the Li-Air battery can be ...

Pointe aux Cannon Battery (Google Maps). The Pointe aux Canons Battery was a fort on the island of Saint Pierre in Saint Pierre and Miquelon built by the French to defend the islands from British attacks in 1690-1713. The 6 cannon battery was ...
