Sustainable Development and the ...

Despite inconsequential historic greenhouse gas emissions (representing less than 0.09 percent of total global emissions), climate models show that Somalia could see mean temperatures increase between 3°C and 4°C by 2080. This is bound to have devastating effects as the Somali economy is largely agrarian and dependent on food exports.

Global investors are often hesitant to invest in Somalia, deeming it too risky due to security concerns, political instability, and ambiguous business regulations. While this is, in part, justifiable given the East African nation's last 30 tumultuous years, the future looks bright for private investment in energy in Somalia. Why?

The Growth, Enterprise, Employment and Livelihoods (GEEL) program promotes inclusive economic growth throughout Somalia. Through GEEL, USAID accelerates Somalia's growing integration into the global economy through a combination of initiatives that improve the country's competitiveness; spur new investments; and increase market linkages and business ...

Forests are Somalia's principal indigenous energy resource, supplying about 90% of overall energy demand, but these are threatened by long term damage and degradation. ... the World Bank Group is a unique global partnership: five institutions working for sustainable solutions that reduce poverty and build shared prosperity in developing ...
