Typically we want to charge a daily use off grid power system at 10% to 13%+ current (100 AH battery * 10% rate of charge = 10 amp charging current). GEL batteries typically want 5% or a bit less maximum or charging current. High charging current can damage them. Their GEL batteries are designed for float operation (UPS/Emergency backup power).

Let's explore the difference between lithium and lead acid battery. Lead-acid batteries and lithium batteries are very common backup power, in choosing which battery is more suitable for your device application, due to the different characteristics of the two batteries, you need to take into account a number of factors, such as voltage, capacity, number of cycles and ...
