

Will Taiwan Power Co sell green power to SMEs?

State-run utility Taiwan Power Co (Taipower) is soon to begin selling small amounts of green power to small and medium-sized enterprises (SMEs) in Taiwan to help them meet the need for carbon reduction demanded by their clients, Minister of Economic Affairs Wang Mei-hua (???) said on Friday.

Does Taiwan have a green power system?

Moreover, since Taiwan's renewable energy generators used to contract with Taipower, the proportion of those entering the FIT system remained high over the past five years. In May 2020, Taiwan completed its first green power wheeling, with a total volume of over 110 million kWh, marking the first year of green power trading in Taiwan.

Is Taiwan a green power market?

In May 2020, Taiwan completed its first green power wheeling, with a total volume of over 110 million kWh, marking the first year of green power trading in Taiwan. To date, Taiwan's green energy market has experienced a persistent supply shortage, resulting in high prices and have attracted more and more renewable energy generators to the market.

Will offshore wind power be a pillar of Taiwan's green energy supply?

This is because the wind farms signed in recent years will be connected to the grid from 2024 onwards, which, coupled with the subsequent zonal development of 500 MW per phase, will make offshore wind power an important pillar of Taiwan's future green energy supply.

Why are green energy prices so high in Taiwan?

The trading mechanism in Taiwan's green energy market is much more stringent than in other Asian countries, and the threshold for entry is relatively high, as most transactions are based on the signing of PPAs. Therefore, the lack of access and the high prices caused by insufficient supply are major obstacles for many buyers in Taiwan.

Who monopolizes Taiwan's electricity market?

Taiwan's electricity market has long been monopolized by the state-owned Taiwan Power Company (Taipower), including generation, sales, transmission, and distribution. In 2017, Taiwan made significant amendments to the Electricity Act, opening up competition in generation, sales, and other electricity services to private enterprises.

Taiwan's ambitious net-zero emissions goal by 2050 faces challenges due to limited resources, high tech sector demands, reliance on imported fuels, and a contentious energy debate, despite significant gains in renewable energy.
