

How is fostering more sustainable energy solutions contributing to the local energy market's competitive edge? To secure its competitive edge, Trinidad and Tobago must embrace energy diversification and technological ...

The NGC Green Energy Map of Trinidad and Tobago 2024 Edition . The Trinidad and Tobago Energy Map has historically focused on oil and gas resources. However, over the past few years, the local energy sector has been embracing the transition towards a cleaner energy future.

"For the region, a just energy transition offers a chance to foster economic growth by means of investments in green technologies, energy efficiency and renewable energy. "For example, the creation of green jobs can aid economic diversification and reduce unemployment, particularly in regions that presently rely on fossil fuel industries." >

NGC Green: Transforming Trinidad and Tobago's Energy Landscape. NGC Green Company Limited is a wholly-owned subsidiary of NGC, helping to institute a cleaner energy future through investment in low-carbon fuels, energy efficiency, sustainable transportation and associated research and development.

Green Energy Transition in T& T. Trinidad and Tobago (T& T), recognised globally for its successes in transitioning from an oil economy to gas and gas-based petrochemical industries, as well as developing an indigenous energy sector workforce to enable these transitions, has to keep its eye on global structural changes to energy supply and ...

COMPRESSED natural gas (CNG) supplier NGC CNG was rebranded as NGC Green with an expanded remit of renewable energy and energy efficiency in a launch on Wednesday at Hyatt Regency, Port of Spain. ...

How is fostering more sustainable energy solutions contributing to the local energy market's competitive edge? To secure its competitive edge, Trinidad and Tobago must embrace energy diversification and technological innovation.

Trinidad and Tobago is targeting and working towards a 15% reduction in cumulative greenhouse gas emissions by 2030; in absolute terms, this represents an equivalent to 103 million tonnes of Carbon Dioxide Equivalent being removed from the environment.

Green hydrogen is another hydrogen technology that can decarbonise the sector and add significant economic sustainability to the local energy sector. With the country's first utility-scale solar farm under development and a revised target of 30% renewables by 2030, production of green hydrogen can become a reality in the medium to long
