Can solar panels be installed on rafters or trusses?

Whether your roof is constructed with rafters or engineered trusses, both can be good fits for solar panels. Both rafters and trusses provide significant structural integrity for a solar panel installation, and most solar companies have significant experience installing on both types of roof supports.

## How do I install a solar PV system?

Install a mounting system for solar thermal or solar photovoltaic panels. Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Choose an appropriate racking and mounting system for the type of PV module, and install the system along with needed flashing and seals.

### Can a photovoltaic system replace roof cladding?

It is possible for photovoltaic systems to replace roof cladding entirely. This is known as a solar or energy roof. Additionally, PV modules can be integrated into the roof cladding. Solar roof tiles are a special type of in-roof installation. They can be integrated into the existing roof cladding without any extra mounting systems.

#### How do you install solar panels on a roof?

Attaching the hooks to rafters- Installing solar panels often means securing them to the rafters of your home. This means removing roof tiles/slates to screw the hooks for the frame into your roof rafters. After the step,the installers will replace tiles/slates and make your roof water-tight again.

#### How do you install PV panels on a house?

The most common method of installing domestic PV panels is mounting them to your rafters. This is done with custom hooks, aluminium mounting frames and specialist clamps. When a property is over one storey high, scaffolding is essential to gain roof access as the engineers need access to work on the roof.

### What factors should you consider when installing roof-mounted solar panels?

One of the most important factors when installing roof-mounted solar panels is the condition and structure of the roof. It's vital that a roof be able to not only hold up the weight of the solar panels,but also withstand any wind loads that could pull on the roofing.
