Explaining the process of preparing the used battery for export, he told SNA that first the acid, which is a hazardous waste, potentially dangerous to human health must be drained out. "Unless this is done, the acid can eat away at the metal of ...

For instance forms are to be completed and permits issued in order for a person to export waste oil, car batteries, scrap metals, pet bottles, aluminum can from the Seychelles. Similarly a form ...

Solid waste management poses a significant challenge to Seychelles. As a small island state surrounded by the ocean, there is a scarcity of land and a lack of engineered landfills. The island generates about 80,000 tons of waste per year, though this number is expected to increase by 50 percent by 2030.

Here are a few ideas from Sustainability for Seychelles of what we can all do at home, at school and at work to reduce, re-use and recycle waste, and help divert it from landfills. Remember, out of the three R's, recycling is the last option as

As a small island state, Seychelles has an extremely limited land area available for storage of solid waste. Methane from landfills represents a significant contribution to greenhouse gas (GHG) emissions and is 21

The first solid waste master plan for Seychelles was carried out in 1995 by the international firm ITW supported by the European Union. The document detailed waste forecast for 20 years and a strategy. In particular it recommended the complete privatisation of waste management, which will lead to improved
