Which roof is best for solar panels?

No one type of roof is best for solar panels - mounting solutions exist for just about every roof out there. Some roofs will cost more to mount solar panels on. This is due to the different equipment installers need to use. Start comparing customized solar quotes today on the EnergySage Marketplace.

Are in-roof solar panels a complete roofing solution?

Although sometimes mistakenly referred to as solar roof tiles, integrated solar panels are not designed to look like tiles or slates, so they aren't generally a complete roofing solution. So, when installing in-roof solar panels, you'll still need to account for other materials in your planning and calculations of in-roof solar panels costs.

Can solar panels be installed on a commercial roof?

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

Can a UK roof support solar panels?

As long as your roof is pitched, has enough unshaded space, and doesn't contain spray foam insulation underneath, it should be suitable for solar panels. The large majority of UK roofs are more than capable of supporting solar panels for as long as you need them to.

What is on-roof solar roofing?

On-roof solar panels make up the most widely recognisable solar roofing system in the UK. The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics.
